

Inserting figures and evaluated examples

Georgi N. Boshnakov

Abstract

Package **lagged** provides classes and methods for objects, whose indexing naturally starts from zero.

This vignette is part of package **lagged**, version 0.2-0.

Keywords: lag, autocorrelation, indexing.

1. Univariate lagged objects

Create a univariate lagged object¹:

```
> a1 <- drop(acf(ldeaths)$acf)
> la1 <- Lagged(a1)
> la1
```

An object of class "LaggedId"

Slot *data*:

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 |
|--------------|--------------|--------------|--------------|--------------|--------------|
| 1.000000000 | 0.755051141 | 0.396956836 | 0.019395714 | -0.355897989 | -0.608566374 |
| Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 | Lag_11 |
| -0.681383469 | -0.607909875 | -0.378212377 | -0.012975866 | 0.383252644 | 0.650206704 |
| Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 |
| 0.723167071 | 0.638001465 | 0.371577811 | 0.009467461 | -0.293699737 | -0.496742216 |
| Lag_18 | | | | | |
| -0.585558984 | | | | | |

`maxLag()` returns the maximal lag in the object. `length()` returns the number of lags in the object, i.e. `length(la1) == maxLag(la1) + 1`. This relation is a definition and holds also for multivariate lagged objects. In particular, the length is not necessarily the length of the data slot.

```
> maxLag(la1)
```

```
[1] 18
```

```
> length(la1)
```

```
[1] 19
```

2. Indexing

¹The datasets `ldeaths`, `fdeaths` and `mdeaths` are in base R. The examples involving them are adapted from the help page of `acf()`.

Indexing drops the "laggedness" to allow easy access to the underlying data²:

```
> la1[0]

[1] 1

> la1[0:4]

[1] 1.00000000 0.75505114 0.39695684 0.01939571 -0.35589799

> la1[c(1,3,5)]

[1] 0.75505114 0.01939571 -0.60856637

> la1[]

[1] 1.000000000 0.755051141 0.396956836 0.019395714 -0.355897989
[6] -0.608566374 -0.681383469 -0.607909875 -0.378212377 -0.012975866
[11] 0.383252644 0.650206704 0.723167071 0.638001465 0.371577811
[16] 0.009467461 -0.293699737 -0.496742216 -0.585558984

> la1a <- la1
> la1a[] <- round(la1, 2)
> la1a
```

An object of class "Lagged1d"

Slot *data*:

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| 1.00 | 0.76 | 0.40 | 0.02 | -0.36 | -0.61 | -0.68 | -0.61 | -0.38 | -0.01 | 0.38 |

| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 |
|--------|--------|--------|--------|--------|--------|--------|--------|
| 0.65 | 0.72 | 0.64 | 0.37 | 0.01 | -0.29 | -0.50 | -0.59 |

```
> la1b <- round(la1, 2)
> all(la1a == la1b)
```

```
[1] TRUE
```

3. Unary arithmetic and mathematical functions

Unary arithmetic operations and mathematical functions replace the data part of the object and keep its class.

```
> -la1a
```

An object of class "Lagged1d"

Slot *data*:

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| -1.00 | -0.76 | -0.40 | -0.02 | 0.36 | 0.61 | 0.68 | 0.61 | 0.38 | 0.01 | -0.38 |

| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 |
|--------|--------|--------|--------|--------|--------|--------|--------|
| -0.65 | -0.72 | -0.64 | -0.37 | -0.01 | 0.29 | 0.50 | 0.59 |

²For some indices, such as 0:4, it is possible to keep a Lagged class but it would be confusing if the indexing operation was returning Lagged or non-Lagged objects depending on the values of the index.

```
> +la1a
```

```
An object of class "Lagged1d"
```

```
Slot *data*:
```

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| 1.00 | 0.76 | 0.40 | 0.02 | -0.36 | -0.61 | -0.68 | -0.61 | -0.38 | -0.01 | 0.38 |

| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 |
|--------|--------|--------|--------|--------|--------|--------|--------|
| 0.65 | 0.72 | 0.64 | 0.37 | 0.01 | -0.29 | -0.50 | -0.59 |

```
> ## Math group
```

```
> abs(la1a)
```

```
An object of class "Lagged1d"
```

```
Slot *data*:
```

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| 1.00 | 0.76 | 0.40 | 0.02 | 0.36 | 0.61 | 0.68 | 0.61 | 0.38 | 0.01 | 0.38 |

| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 |
|--------|--------|--------|--------|--------|--------|--------|--------|
| 0.65 | 0.72 | 0.64 | 0.37 | 0.01 | 0.29 | 0.50 | 0.59 |

```

```

```
Slot *data*:
```

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|--------|--------|--------|--------|--------|--------|--------|--------|-------|-------|--------|
| 1.00 | 0.76 | 0.40 | 0.02 | -0.36 | -0.61 | -0.68 | -0.61 | -0.38 | -0.01 | 0.38 |
| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 | | | |
| 0.65 | 0.72 | 0.64 | 0.37 | 0.01 | -0.29 | -0.50 | -0.59 | | | |

```
> signif(la1a, 4)
```

```
An object of class "LaggedId"
```

```
Slot *data*:
```

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|--------|--------|--------|--------|--------|--------|--------|--------|-------|-------|--------|
| 1.00 | 0.76 | 0.40 | 0.02 | -0.36 | -0.61 | -0.68 | -0.61 | -0.38 | -0.01 | 0.38 |
| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 | | | |
| 0.65 | 0.72 | 0.64 | 0.37 | 0.01 | -0.29 | -0.50 | -0.59 | | | |

The functions from the summary group work on the data part, as if they were called on it.

```
> c(Max = max(la1a), Min = min(la1a), Range = range(la1a))
```

| Max | Min | Range1 | Range2 |
|------|-------|--------|--------|
| 1.00 | -0.68 | -0.68 | 1.00 |

```
> c(Prod = prod(la1a), Sum = sum(la1a))
```

| Prod | Sum |
|---------------|--------------|
| -7.582098e-11 | 9.200000e-01 |

```
> c(Any = any(la1a < 0), All = all(la1a >= 0))
```

| Any | All |
|------|-------|
| TRUE | FALSE |

Binary arithmetic operators are defined between two lagged objects and between a lagged object and a vector. They return a lagged object from one of the "basic" lagged classes, but not necessarily exactly from the class of the argument(s). The class of the returned value is from a suitable lagged superclass of the argument(s). This concerns operations on objects from classes inheriting from the classes considered here, so is not visible in the examples below, since they use objects from the basic lagged classes.

```
> 2*la1a
```

```
An object of class "Lagged1d"
```

```
Slot *data*:
```

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| 2.00 | 1.52 | 0.80 | 0.04 | -0.72 | -1.22 | -1.36 | -1.22 | -0.76 | -0.02 | 0.76 |

| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 |
|--------|--------|--------|--------|--------|--------|--------|--------|
| 1.30 | 1.44 | 1.28 | 0.74 | 0.02 | -0.58 | -1.00 | -1.18 |

```
> la1a^2
```

```
An object of class "Lagged1d"
```

```
Slot *data*:
```

| Lag_16 | Lag_17 | Lag_18 |
|-----------|-----------|-----------|
| -0.024389 | -0.125000 | -0.205379 |

```
> la1a / la1a^2
```

An object of class "Lagged1d"

Slot *data*:

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 |
|-----------|-----------|-----------|-------------|-----------|-----------|
| 1.000000 | 1.315789 | 2.500000 | 50.000000 | -2.777778 | -1.639344 |
| Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 | Lag_11 |
| -1.470588 | -1.639344 | -2.631579 | -100.000000 | 2.631579 | 1.538462 |
| Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 |
| 1.388889 | 1.562500 | 2.702703 | 100.000000 | -3.448276 | -2.000000 |
| Lag_18 | -1.694915 | | | | |

```
> la1a + 1:length(la1a)
```

An object of class "Lagged1d"

Slot *data*:

| Lag_0 | Lag_1 | Lag_2 | Lag_3 | Lag_4 | Lag_5 | Lag_6 | Lag_7 | Lag_8 | Lag_9 | Lag_10 |
|--------|--------|--------|--------|--------|--------|--------|--------|-------|-------|--------|
| 2.00 | 2.76 | 3.40 | 4.02 | 4.64 | 5.39 | 6.32 | 7.39 | 8.62 | 9.99 | 11.38 |
| Lag_11 | Lag_12 | Lag_13 | Lag_14 | Lag_15 | Lag_16 | Lag_17 | Lag_18 | | | |
| 12.65 | 13.72 | 14.64 | 15.37 | 16.01 | 16.71 | 17.50 | 18.41 | | | |

There is a case to argue for keeping the class in some situations, e.g. when the other argument is a scalar but eventually I decided to keep the simple rule of not trying to preserve the class.

Note however that unary operators and mathematical functions do preserve the class.

4. Multivariate lagged objects

Compute the autocorrelations of a multivariate time series and convert it to a lagged object.

```
> acv2 <- acf(ts.union(mdeaths, fdeaths))
> la2 <- Lagged(acv2)
```

Get the value for lag 1.

```
> la2[1]
```

```
, , 1
```

| | [,1] | [,2] |
|------|-----------|-----------|
| [1,] | 0.7570591 | 0.7356685 |
| [2,] | 0.7443093 | 0.7295201 |

```
> acv2$acf[2, ,] # same
```

| | [,1] | [,2] |
|------|-----------|-----------|
| [1,] | 0.7570591 | 0.7356685 |
| [2,] | 0.7443093 | 0.7295201 |

Indexing in `acf()` is somewhat misterious. For some insight, here is a comparison with a DIY calculation of the autocorrelations.

```
> n <- length(mdeaths)
> tmpcov <- sum((mdeaths - mean(mdeaths)) * (fdeaths - mean(fdeaths)) ) / n
> msd <- sqrt(sum((mdeaths - mean(mdeaths))^2)/n)
> fsd <- sqrt(sum((fdeaths - mean(fdeaths))^2)/n)
> tmpcov1 <- sum((mdeaths - mean(mdeaths))[2:n] * (fdeaths - mean(fdeaths))[1:(n-1)] ) / n
> tmpcov1 / (msd * fsd)
```

```
[1] 0.7356685
```

```
> la2[[1]][1,2] == tmpcov1 / (msd * fsd) # FALSE, but:
```

```
[1] FALSE
```

```
> la2[[1]][1,2] - tmpcov1 / (msd * fsd) # only numerically different
```

```
[1] 2.220446e-16
```

Some examples for the correspondence between the indices in lagged objects and those from `acf()`.

```
> la2[[1]][1,2] == acv2$acf[2, 1, 2] # TRUE
```

```
[1] TRUE
```

```
> la2[0]
```

```
, , 1
```

```
      [,1]      [,2]
[1,] 1.0000000 0.9762413
[2,] 0.9762413 1.0000000
```

```
> acv2[0]
```

Autocorrelations of series 'ts.union(mdeaths, fdeaths)', by lag

```
, , mdeaths
```

```
 mdeaths  fdeaths
1.000 (0) 0.976 (0)
```

```
, , fdeaths
```

```
 mdeaths  fdeaths
0.976 (0) 1.000 (0)
```

```
> la2[1]
```

```
, , 1
```

```
      [,1]      [,2]
[1,] 0.7570591 0.7356685
[2,] 0.7443093 0.7295201
```

```
> acv2[1]
```

```
Autocorrelations of series 'ts.union(mdeaths, fdeaths)', by lag
```

```
