% Last updates starting after releasing the beta-test version 2.995:
% ===========
% - V 2.996 process \cite \bibitem and \bibcite
%                                   (LaTeX problem reported by Roman Keryell)
%                and \special that was forgotten           --bg 12/03/91
% - V 2.997 add macros to uppercase \oe and \ae (\minMAJ)    --bg 12/06/91
%           correction of spacing when using \untypedspaces option.
%                           (Problem reported by Daniel Flipo)  --bg 12/12/91
%           addition of \I if undefined as uppercase of \i     --bg 12/13/91
%           correction (missing penalty before in '?' code)
%                           (Problem reported by Daniel Flipo)
%           addition of \AllTeX                                --bg 12/16/91
%           unneeded \global removed, stated by Rainer Sch\"opf
%           added \clearpage in \annexe \glossaire as
%                                   proposed by Rainer Sch\"opf
%           idem in \index and \enddocument                   --bg 12/18/91
%           correction of misfit in \ccname and \enclname with
%                       the official LaTeX distribution.
%           addition of \numero and \Numero
%           corrections in abbrevfr.tex                        --bg 12/19/91
% - V 2.998 check definition of \printindex instead of \see to
%                       include makeidx.sty (Ronan Keryell)
%           eliminate double definitions of \ouvreguillemets and
%                       \fermeguillemets    (Daniel Flipo)
%           correct kerning for guillemets (sugg. by Daniel)
%           wrong spacing introduced in V2.997 before '?'
%           inapropriate blank removed before opening guillemets
%           \mathrm and \mediumseries added if undefined       --bg 12/31/91
% - V 2.999 skipped
% - V 3.00  released 1/2/92
% - V 3.01  Change 10000 to \@M. Introduce \@minpenalty and replace
%                \@highpenalty by \@minpenalty so reducing negative
%                penalties before processing opening guillemets.
%           Replace \hsize by \linewidth.                      --bg 01/16/92
%           Add order environment proposed by Ronan Keryell as an experimental
%                       prototype of a french ordered list
%                       + parsep, itemsep and topsep  adapted  by   --bg 01/17/92
%           Mods for DCM used with NFSS (sugg. by Yannis H.)      --bg 01/20/92
%           Mods for OzTeX 1.3 : eliminate all \openin codes because
%                this version has difficulties to follow the path.
%           Add \leftguillemets and \rightguillemets (D. TAUPIN)  --bg 01/21/92
%           Correct size of \footnotemark in \thanks (sug J.ANDRE)--bg 01/22/92
%           Allow \guillemetsinallfonts if requested (pointed by Yannis H.)
%           Improve font assignement for guillemets.
%           Wrong font family in \@@FE (pointed by Yannis H.)     --bg 01/27/92
%           Local to global \ifECM setting (guillemets were not in DC as
%                           pointed by Yannis HARALAMBOUS)
% - V 3.02  \global\let put outside \@initfrenchmacros in the
%                appropriate environment and so avoiding loops.  --bg 01/29/92
%           OzTeX 1.4 has the same pb : version number change.
%           Default math chars used for guillemets now \ll & \gg
%           Correct use of ECM fonts for guillemets               --bg 02/03/92
%           Spacing of opening guillemets revisited               --bg 02/04/92
%           \@minpenalty removed definitely
%           \frenchspacing modified for << and >> in ECM
%           Removed spaces in \@FIM
```

```
%                Become very tolerant in noeveryparguillemets      --bg 05/02/92
% - V 3.03  Apply the order environment only in \Latex{}.          --bg 06/02/92
%           Introduce \beginlanguage to be the language used  after
%                    \begin{document} (accordingly modified).
%           Improve indentation of the order environment, allowing
%                a second digit in the list (aligned on parindent).
%           Kerning in \@@FPE increased by 0.3em.
%           Default value of \protect is now a null string.      --bg 02/10/92
%           Nullify \par in \noeveryparguillemets, correct line size used
%           for processing boxes (don't use in more than 2 cols!) --bg 02/17/92
% - V 3.04  Avoid duplicate guillemets at \everypar time.
%           Allow \sommaire without \tableofcontents (\@starttoc modified so it
%                will not make the file empty) [rep. by D. Flipo]  --bg 02/21/92
%           Slight mod for MlTeX V2 with \noenglishquote (nul hbox introduced
%                after accent, sugg. by Yannis H.& Michael Ferguson)--bg 02/24/92
% - V 3.05  Don't require language.dat in an allready MlTeX env.
%           Error message added in case of language.dat no more accessible.
%                                                                  --bg 02/28/92
% - V 3.06  Added the possibility to have an exception file for
%                each language specified in language.dat           --bg 03/13/92
%           Let \tilde be a normal math command as in plain (reported
%                and corrected by Ronan Keryell)                   --rk 03/15/92
%           Added \lefthyphenmin,\righthyphenmin in case any other language
%                changes default (xx)plain values.
%           \fsc proposed to put patronymic names in small caps.
%           As pointed by D. Flipo \sommaire didn't create a toc (a piece
%                of code was...forgotten in \@starttoc).
%           \refmark now allows refering to a \label as a \footnotemark
%                                                                  --bg 03/17/92
% - V 3.07  \dittomark now globally defined
%           \moretolerance might be useful in narrow columns
%           \@LP and \@RP now expanded defs
%           Redefine \newwrite for plain TeX as in lplain         --bg 03/20/92
%           Don't hyphenate \fsc{name}
%           \lsc proposed to put names in lower case small caps.  --bg 03/25/92
%           Toc wasn't rewritten if \sommaire given(pointed by DF)--bg 03/30/92
% - V 3.08  Don't hyphenate words starting with a capital letter
%           Let \! run outside math mode                          --bg 04/02/92
%           \if@filesw eq \relax in TeX                           --bg 04/06/92
% - V 3.09  Added a flag in .toc to know if there is any \tableofcontents
%                    after \sommaire and then have an up-to-date .toc file
%                                                                  --bg 04/06/92
%           Be able to print \sommaire and toc in the same pass
%           \addtocontents only in LaTeX
% - V 3.09a This is the alpha test version for V3.1 distribution  --bg 04/10/92
%           Avoid double \tf@toc defined (specially for Atari implem)
%                                    as D. Flipo pointed out  --bg 04/13/92
% - V 3.09b Propose a \versatim environment as well as \vers that allows
%                 to hyphenate text in verbatim as done in verse
%           \allowuchyph and \disallowuchyp introduced
%           \allowuchyph as default (as requested by people at the
%                    "francisation" meeting of 04/15/92, ENS Paris)--bg 04/17/92
%           These commands aren't changed over a \french recall    --bg 04/21/92
%           \obeyspaces reintroduced in versatim environments      --bg 04/23/92
%           Versatim did pollution on verbatim environments
%           \tthyphenation and \notthyphenation introduced         --bg 04/28/92
%           \@og and \@fg redesigned for plain                     --bg 04/29/92
%           Ronan Keryell suggested a frenchtabbing environment...
%                 I prefered an option (\tabbingaccents}
```

```
%               Count \l@ngue replace by \@nycount (to say reusable)  --bg 05/15/92
%               Update of \subsee as published in TUGboat (H. Thimbleby).
%               As reported by Ronan Keryell french options can't be
%               easily given in a personal/local style so i decide to
%               introduce \usersfrenchoptions for style design        --bg 05/29/92
%               Start a line with \fsc will no more introduce a new line
%                       after it (as reported by Ronan Keryell)
%                       \leavevmode introduced in \lsc & \fsc.    --bg 06/03/92
%               Avoid loop when \sommaire is typed twice (rep. R.K.)
%                       original \tableofcontents definition now saved
%                       outside the definition of \sommaire      --bg 06/04/92
%               Opened guillemets \if flag was erroneously reset when
%                       switching to another language (\@AFP mods)
%               Process \pageref as \ref (pb reported by R. Keryell) --bg 06/19/92
%               Math guillemets changed to do unskip+hskip only when
%                       lastskip was positive (pb rep. R. Keryell)
%                       & spacing moved from 0.5 to 0.35em        --bg 06/22/92
%               Protect \ier \iere and \ieme                      --bg 07/06/92
%               \nocite now protected (as pointed by Ronan Keryell)  --bg 07/27/92
%               \fsc wasn't protected against an accent macro (as pointed
%                       by R.K.) so i add an  \expandafter of parm --bg 08/20/92
%               Spacing after << was greater than before >> (as pointed
%                       by R.K.) when TeX increase his inter-words tolerance,
%                       so i added appropriate stretchable glue
%                       before >> where there was initially none.  --bg 08/21/92
% - V 3.09c Scheme proposed by Nicolas Jungers to test if < and >
%                       are the first part of guillemets is included.
%                       Allowing \ifnum and others to run now!
%               Spaces ignored after \nonfrench                    --bg 08/21/92
%               Check if language numbers are the same as at initex
%                       (suggested by Patrick W. Daly)
%               \errmessage added when language.dat is invalid.    --bg 08/24/92
%               Reintroduce the old coding of guillemets when
%                       \EBCDICbrackets is active to avoid that
%                       < < be exactly the same as << (idem > >)   --bg 08/26/92
%               \letpunctuationactive was never reset              --bg 08/27/92
%               Removed test of \space after >> (never okay)       --bg 08/31/92
%               Bernd Raichle claims that TeX expands the first token
%                       of a column entry with a \halign to look for
%                       \noalign, \span and \omit and suggested to
%                       insert a \relax before \iffmode: done everywhere.
%               Versatim environment isn't clean, don't use it in an
%                       \item-ized environment.                    --bg 09/01/92
%               Allow \AllTeX to be printed in all fonts           --bg 09/14/92
%  - V 3.09d Improve letter.sty with address placement via \opening,
%            as well as \closing layout and propose:
%                       to print \location along with the date
%                       \yourref{...} to refer to the received letter
%                       \ourref{...} for your own reference
%                       \object{...} to precise the object
%                       \PS{...} for a post-scriptum.              --bg 09/22/92
%  - V 3.09e abbrevfr.tex renamed frabbrev.tex
%               \usersfrenchoptions becomes a macro with one parm.  --bg 09/23/92
%
%  -  This is now beta test for V3.10                              --bg 09/23/92
%
%  - V 3.09f \@ufo has not to be redefined if already defined.
%          A lot of change for letters:
%          Moved to \thispagestyle{firstpage}, layout revisted,
```

```
%               \email{...} now proposed as well that heading and footings
%                    via \formhead and \formfoot (odd pages)    --bg 09/25/92
%               \@glossaryfile closed over \glossaire(s)
%               Define \glossaryentry if undefined              --bg 10/05/92
%               Offer a default glossary environment
%                    and a \printglossary[filename] command      --bg 10/09/92
%               Limit parm of \pfill with a blank.              --bg 11/06/92
%               Set \captionsnames to french ones only if needed.
%               \captionsfrench were loaded twice at each \french.
%               \endnonfrench was wrong outside \french.        --bg 11/16/92
%               Replacing tabular by \parbox in \fromaddress printing
%                    and other smart refinements.
%               Create environment "figurette" that means place the
%                    little figure or table EXACTLY here
%                    (using the idea of David Carlisle)
%                    (name proposed by Ronan Keryell).          --bg 11/18/92
%               Offer \pointvirgule, \deuxpoints, \pointinterrogation,
%                    \pointexclamation for normal "; : ? !".
%               \endtable & \endfigure didnt reset \if@MOVING.
%               \captionsnames recall corrected.                --bg 11/19/92
% - V 3.09g Don't issue a \marginpar when there is no par.
%               Don't find an abbreviation when it is asken for blank--bg 11/20/92
%               Open guillemets generated when starting items in
%                    environments order and itemize when << opened.
% - V 3.10 is now released.                                     --bg 11/23/92
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% - V 3.11 \englishTeX wasnt changed to \englishTeXmods         --bg 11/30/92
%               \@footnotetext wasnt \long defined(found by R.Keryell)
%               \sm@ller needed to be protected in \fup and
%                    in \up (loop found by Michel Lavaud).       --bg 12/01/92
%               Allow language number in \NouveauLanguage to be
%                    a macro (pointed by Daniel Taupin).         --bg 12/08/92
%               Don't bring a new def. for \resume if there is one.   --bg 12/15/92
% - V 3.12 Allow \thanks to have a multiletter \@footnotemark
%                    (pointed by J. Andre comparing with feuro.sty).
%               Add a thin space before each footnote mark as required
%                    by the "Imprimerie Nationale".
%               Add \em if undefined (outside LaTeX) as an alias of \it.
%               Print the caption text in italics (as required).    --bg 01/04/93
%               \label is earlier protected (required for \thanks) but one
%                    must protect active chars when used in thanks.
%               \thanks now locally redefining the footnotemark.    --bg 01/06/93
% - V 3.13 Print footnote number in the same font as the footnote
%                    text followed by a dot (only outside minipages).
%               Table generate footnotes as in minipage. Surprise! When
%                    using tabular inside the table environment, this
%                    solves definitely the loss of \footnotetext.
%               Add thin space between footnote char and footnote text
%                    when used in a minipage.                   --bg 01/07/93
% - V 3.14 \fsc and \lsc changed to process letters with TeX
%                    diacritics in their parameters.
%               Protect \glossary (was a LaTeX bug, isn't it?) and avoid
%                    problems with \c macro when used inside.    --bg 01/08/93
%               Captions names saved are no longer those of the options
%                    of style but those before last \french call.
%               Apply a bypass to the pb when using \c in \glossary.
%               Guillemets are now an environment and so error processing
%                    can now apply (drawback mentioned by different
%                    persons, i remind D.Taupin and  J.Andre).    --bg 01/11/93

%                need to be defined so don't test it is present. --bg 05/11/93
% This version is released.                                  --bg 05/11/93
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% Last updates, starting after releasing version 3,20 (May, 11th, 1993):
% ===========
% - V 3,21  - french.sty was unloadable with plain TeX (pointed by DT)
%             few definitions need to be made in a different way
%             (in fact outside any \@ifundefined mechanism).     --bg 06/14/93
% this will be the PATCH 1 of the distribution.
% - V 3,22  - Replacing \nomorefrench by \endfrench to allow
%             people to code \begin{french}...\end{french}       --bg 06/25/93
%           - Incorrect block propagation trough \lettrine
%             processing (pointed by Jacques Andr\'e).           --bg 06/28/93
%           - \fromaddress printed in a \vbox of 0pt.        Ronan 06/30/93
%           - Put \toaddress at the previous place (4 lines below)--bg 07/01/93
% - V 3,23  - < adapted for AmSLaTeX when followed by \frac as
%                pointed by Jacques Beigbeder.
%           - @ can now be \undefined (pointed by Daniel Taupin).
%           - Former definition of \vert was not saved. New def
%             called former def of \verb (pointed by D. Taupin).  --bg 08/09/93
%           - New version of the @-save-restore mechanism.        DT 08/10/93
%           - Hanging of \lettrine lines can be forced via
%             \def\lettrinehang{n} (J.Andre pointed the pb with Q)--bg 08/10/93
%           - As in babel (TUGboat V14#1 p 60), now defining
%             \prefacename (but unused in french.sty because its
%             definition is looking really simple:
%                   \def\preface{\chapter*{\prefacename}}
%             BUT NOTICE that the page numbering of a french preface
%                     is usually in roman.
%             Babel currently define \languagename as a string of
%             "other" characters; in my opinion i prefer to differ
%             this definition until we come back to "normal" chars.
%           - Sets the orientation of writing as in TeX--XeT
%           - use \FontEncoding if already defined instead of
%                any other code.                                --bg 08/17/93
% this will be the PATCH 2 of the distribution.
% -V 3,24 - \bibcite[ pointed wrongly to the original \cite.
%         - Redefinition of \c in \@wrglossary suppressed since
%           \c is now correctly defined in hyconfig (MJF mods).  --bg 08/19/93
%         - 8-bit codes for << and >> must not be expanded as
%           usual with our grouping mechanism when they are
%           inside a verbatim (test is made "a contrario" to see
%           if < or > are \active).                              --bg 08/27/93
%         - Replace \FontEncoding by \encodingdefault of NFSS2.   --bg 08/31/93
```

```
%          - NFSS2 code added for guillemets.
%            I have noticed that \ref can't be used in math mode
%            with NFSS2 because \ref calls \bf!
%          - Using the current encoding if any (\f@encoding).    --bg 09/01/93
%          - \@Hif \@Hfi globaly defined (until other language defs
%              use them).                                        --bg 09/03/93
%          - \noabbreviations was wrongly called by default. It
%              forced \catcode'"=12 (as shown by R.D.Cosmo).     --bg 09/06/93
% V3,25 - \relax wrongly introduced recently in <<.
%          - \footnote now start with \nobreak to allow hyphenation of
%            previous word (as suggested by Bernd Raichle).      --bg 09/07/93
%          - \@FrDimenH was undefined with \flettrine.           --bg 09/13/93
%          - < and > striped the following braces, specially wrong
%            in maths as pointed by Sylvio Levy. Code \@PreserveBraces
%            added for this purpose.                             --bg 09/16/93
%          - \lettrine{Essx} striped off ss... (wrong \ifx#2...).   --bg 09/17/93
%          - \the\font replaced by \font in \xxtthyphenation.    --bg 09/27/93
%          - Revisiting < and > codes for simplification and validation
%            of all known test cases. It's now possible to use < and >
%            in macro definitions such like \def\truc<#1|#2>{...}.   --bg 09/29/93
%          - Having no answer from YH i remove the test on
%            \OzTeXUnPointQuatre for OzTeX 1.4 \openin problem.
%          - "Lettrine" placement revisited. Begining \smallskip
%            removed. Now independent of the font used.
%            Warning issued for an alone letter.                 --bg 10/05/93
%          - Define \endenglish if not already done.            --bg 10/06/93
%          - Test of < and > active removed from \EBCDICbrackets
%            otherwise "<<" and ">>" would never print guillemets.
%            But now, reversely, 8-bit guillemets print brackets.
%          - \@genG and \@BracesOrNot \long defined to allow
%            <\par and >\par.
%          - define \lettrine only if not already defined(RK request)--bg 10/08/93
%          - \thanks now \unskip previous space, as our \footnote do.
%          - Spaces ignored after \endfrench and \endnonfrench.
%            Space removed after \beginL.                        --bg 10/11/93
%          - \lettrinehang is automaticaly incremented when used for
%            char which has a depth.                             --bg 10/19/93
%          - \englishdoublequotes with NFSS2 bypass (as pointed by
%            Denis B. Roegel, log messages issued are not enough
%            protected). This is a bypass (test of hmode added)     --bg 10/21/93
%          - \ifFMA wasn't intially set to \ErrFrench.
%          - Option "slidesonly" of seminar gobbled french initialization
%            which should be made at \begin{document} (as pointed by
%            Denis B. Roegel) and then produced further errors and at
%            least at \end{document}. This is just a bypass:
%            \document modified to inhibit xcomment.sty at this time.--bg 10/28/93
%          - As shown by Denis B. Roegel "L'{\tt a}" produced a loop
%            with NFSS2. This is again a problem of NFSS2 in which
%            all characters are not enough protected. Improved again.--bg 11/04/93
%          - \endguillemets had erroneously a \space included.      --bg 11/05/93
%          - \cite[<< ... >>] output was not in French (as pointed by
%                                              by Jacques Andre).
%            By the way, starting to do a more general macro replacement
%            mechanism. To be completed in further distributions?    --bg 11/08/93
%          - \cite{X} printed [X,] (as pointed by D.Girou).         --bg 11/18/93
%          - \wrontypedspaces now forbidden without previous
%            \letpunctuationactivefor (Denis B.Roegel used it wrongly
%            in the order \usersfrenchoptions).                     --bg 11/24/93
%          - Space missing in lettrines when used in English. But
```

8

```
%          then let a wrong one for a mono-char lettrine.        --bg 11/25/93
% This version is now released as V3,25 of the 25th of November, 1993.

%          by Jean-Michel Male.                                   --bg 12/07/93
%        \noenglishdoublequotes printed wrongly opening double
%          quotes when begining of paragraph.                     --bg 12/10/93
%        \encodingdefault{T1} set before  \documentstyle revealed
%          that \frenchspacing was wrongly coded.(msg from D.Girou)
%        As people often use <} and >} in maths it was needed to be
%          protected against "missing argument". Done in math because
%          guillemets were always nullified in maths. Specially
%          pointed by Denis B. Roegel and Eric Domenjoud.         --bg 12/23/93
%        Defined \sc and \em required to be \global.              --bg 01/04/94
%        As suggested by R. Keryell a new option is introduced to
%          allow full upper case hyphenation, in all situations
%          (today \fsc and \lsc), this is \allowfulluchyph.
% This is definiteley patch 3 of the current distribution.        --bg 01/12/94
% V3,27  \f@encoding might be undefined (as pointed by DT),
%          or different from \encodingdefault, so set it.
%        \@MYrm ws not calling the appropriate mcros (as p. by DT)
%          with NFSS2 and didn't select the font.
%        \frenchspacing was wrong when ECM encoded.
%        \@FP renamed \@RP (internal Right Paren).                --bg 01/12/94
% This is definiteley patch 4 of the current distribution.        --bg 01/13/94
% V3,28  $x''$ produced an error (! Double superscript) when
%          \noenglishdoublequotes was activated (as pointed by
%          Eric Domenjoud). Plain macro modified with \@cilq.     --bg 01/18/94
%        Don't try to print a footnotemarker in french  when
%          it is null (pb submitted by Philippe Louarn).          --bg 01/21/94
%        \lettrine base was lower by n*\lineskip.                 --bg 01/31/94
%        \lettrinehang, when specified, must be the value of
%          \hangafter, even the character has a non-null depth.   --bg 02/07/94
%        The French pagestyle used to replace the plain one of
%          book was also used with report. Now it is only defined
%          when the headings pagestyle is called.(p. by Sarayan)  --bg 02/25/94
%        \lettrine and \flettrine "must" start a paragraph; now
%          they do a \par to avoid overwrite of materials in case
%          someone place something before. (pointed by JA).
%        \newpage, \clear*page are now equal to \relax inside a
%          \lettrine paragraph (pointed by J. Andre).             --bg 03/08/94
%        A lettrine can now have a depth of 0.025\bsaelineskip
%          without adding one more line of \hangafter (point
%          discussed with J.Andre facing LucidaBright which contains
%          many chars with a significative dp0).
%        Warn the user producing a lettrine with \hangafter=1.
%        \@lquote removed, never used.                            --bg 03/09/94
%        \smallskip added after the lettrine paragraph.           --bg 03/10/94
% This is definiteley patch 5 of the current distribution.        --bg 03/11/94
% V3,29  Some time ago Ronan Keryell gave me a code that was able
%          to compute the size of the font when \lettrinehang and
%          fontname were choosen. After simplication and reduction
%          of the code i decided to include it in french.sty with
%          the new control commands \lettrinefontname,
%          \automaticlettrine and \noautomaticlettrine.           --bg 03/17/94
%        Lettrine placement reconsidered for any \lineskip glue.  --bg 03/18/94

%          B. Roegel listed an \inaccesible case with a private
%          package).                                       --bg 11/24/95
%        \index modified to remove unnecessary \@sanitize and allow
%          \@wrindex to run with more than one argument, like in
%          multind.sty (as shown by Ph. Esperet).          --bg 11/24/95
%        Loop on ' expension if $'$ is given in a referenced (\eqref)
%          \tag argument of AmSTeX. (pointed by T. Fuhs)   --bg 04/12/95
%        \label{a:b} produced a \missing \endcsname with amsmath.sty
%          (as shown by Pierre Aubert). Due to \label saved by amsmath
%          before the \begin{document}.                    --bg 06/12/95
%        \cite[\S]{...} generates "\@curr@enc undefined", the argument
%          between brackets is now protected for LaTeX (pb reported
%          by Denis B. Roegel) with \@typeset@protect.     --bg 13/12/95
%        Use \rmdefault instead of cmr. (suggested by F.Boulanger).  FB 18/12/95
%        \@fnt renamed \@fntORI.
%        \@thefnmark contained blocking which let footnotes
%          to be typed in default font encoding (F. Boulanger pointed
%          that always 2 fonts cmr were used), \textnormal used.
%          Definitely not corrected in 2.09 native/compatible.
%        Remove protection by \@typeset@protect (12/13/95) and replace
%          \edef definitions with \protected@edef in \@gM@@.
%        Spacing was skipped for unnumbered footnotes, due to \textnormal
%          introduction, thin space added.
%        Superfluous \, spacing in text after a null footnote marker,
%          removed when \thefootnote=\relax.
%        No more need of \! correction in \@fnsymbol (was a bypass
%          introduced on 01/27/93). So no need of macro change.    --bg 27/12/95
% V3,43 New Year! Claudio Beccari pointed to me that \quatro isn't
%          french at all. \quarto introduced. \quatro now obsolete.--bg 01/02/96
%        Ph. Lalevee show me that with fancyheadings package the
%          heading wasn't empty on "plain" pages. This was due to the
%          correction brought by this package. Mine is then obsolete when
%          fancyheadings is active. \ps@plain reset in that case.  --bg 01/04/96
%        \@sanitizefrench modified to take in account former \@sanitize
%          command (pb noticed with amslatex, \index{<@...}). For plain
%          \@sanitize is let to \relax.                     --bg 02/06/96
%        \AtEndDocument could not process real page number because
```

```
%        french forced a \clearpage which wasn't under control of
%        \frenchlayout. Anyone can now specify \nofrenchlayout before
%        \end{document} and do anythink \AtEndDocument (which takes
%        its effect afterwards).                          --bg 02/19/96
%     xypic conflict with guillemets, can be avoided that way:
%        \catcode`\<=\active\catcode`\>=\active
%        \usepackage{xypic,french}
%        Should xypic have an option to activate guillemets? That's
%        a more general pb to solve in the LaTeX kernel.
%        For plain TeX, just load --in that case-- french.sty before
%        xypic.tex.                                        --bg 02/21/96
%     figure and table environments could generate a "TeX capacity
%        exceeded" (stack overflow) due to a double \begin environment.
%        Macro code was wrongly saved twice and generated a loop. This
%        pb was pointed by Jacques Andre.
%     \nofrenchhyphenation never worked as an option. The \if..\fi
%        mechanism was allways reset to empty. Problem reported
%        by Thierry Bouche.                                --bg 03/11/96
% V3,44 Letter address should no float: raggedbottom introduced.
%        Glue added after \closing (suggested by Thierry Bouche).
%        Added also glue at the end{letter}. \parbox replaced by
%        tabular for the signature, thus avoiding predefined length.
%        \stopbreak moved later before \closing.           --bg 04/03/96
%     Enlarge the letter-width on demand (as suggested by Thierry
%        Bouche): new cs \wideletter introduced.
%     Never call english.sty, but fenglish.sty to avoid pbs
%        with babel.                                        --bg 04/05/96
% V3,45 released for the net.                               --bg 04/10/96
% V3,45a \noenglishdoublequotes introduced a \relax in .toc and .aux
%        as pointed by D.B. Roegel. \relax removed from ending
%        quote \@SRQ.
%        \draftname was ugly, now "- \'epreuve -", finer.   --bg 05/15/96
% V3,45b Environment table* wasn't taken in account (pointed
%        by Yves Bertheau). Code \table* and \endtable* added.  --bg 05/20/96
%        \vref and \vpageref defined in varioref package are now
%         protected against French active chars.
%        As TeX-XeT primitive \beginL leaves vertical mode and
%         enters paragraph mode, an empty page was generated by
%         French at \begin{document}, thus before \maketitle, as
%         pointed by F. Boulanger. \beginL initiated by French
%         is unuseful because it will called by \everypar. So,
%         i remove this first \beginL.                       --bg 05/21/96
% V3,45c Support of consecutive \footnote added likely as proposed
%        by Robin Fairbairns, 1996/01/03, in multiftn.sty.   --bg 05/21/96
%        Lost day.                                           --bg 05/22/96
%        With AmSTeX \nofrenchguillemets is now the default
%        for math, avoiding "\ @>" to lose its parms ">>".   --bg 05/24/96
% V3,45d Nullify patch 96/06/02 for kbconfig correction of accents
%         in math mode. \FSfd now containing the date of french.  --bg 06/03/96
%        \ifthenelse cs of ifthen package doesn't expand \pageref
%         correctly with french. This is normal because \pageref
%         is protected inside french. The package ifthen says this
%         is "unfortunate" and "This means that the whole \ifthenelse
%         command does not work by expansion, and so possibly has only
%         limited usefulness for macro code writers".
%        Spacing was lost after \footnote, due to \ifnextchar.
%         Replaced by \ifNextNB. Consecutive \footnote must not be
%         separated by a space (or anything else) if one wants the
%         footnote numbers be separated by a coma.           --bg 06/07/96
```

```
%           Don't input latexsym package when \ly is defined (for
%             user that will never use OT1 font encoding).        --bg 06/24/96
% V3,46 Load frpatch.sty, if any, to patch french.sty.           --bg 06/25/96
%       \everymath and \everydisplay saved token should contain at
%             least \relax (pb pointed by Th. Bouche).           --bg 06/28/96
%         Loop on \@PrevE when no language.dat and \english undefined,
%             due to its infinite expansion. Now using \l@english
%             instead, which is defaultly set to 0.              --bg 07/01/96
%         As \selectlanguage of babel contains \undefined variable
%             (\babel@savevariable) in 3.5 i check it to decide if i use
%             the babel semantic (\selectlanguage{french}) or the
%             French one (\french).                              --bg 07/02/96
% Now we can release it. (babel testing to be improved)          --bg 07/04/96
% V3,47 Index package added one optional argument to \index as
%             shown by D. Girou. Case now included in \seealso too.  --bg 07/11/96
%         Warning messages wrongly expanded for no kbconfig installations
%             as pointed by D.B.Roegel. Local \@gobble had wrong name,
%             changed to \@nobraces (to show we remove braces here).
%             LaTeX2e uses now a macro \add@accent we must gobble if
%             user don't output 8bits messages. So we do it for non-MlTeX
%             users. Protect ":" in French banner and in usual \@fw (case
%             of ":" is already a macro).
%         Notice that if accents in banner are wrongly output to the log
%             that means probably MlTeX is active but kbconfig not chosed.
%         Space added in banner right after the year.            --bg 08/07/96
%         Pagestyle completed for fancy headings, as suggested by
%             Alexandre Chartre, \ps@french modified.
%         \labelsinmargin bug when \label inside a figure, as pointed
%              by Marc Torsynski, then:
%         \figure & \endfigure corrected. 1) French coding wasn't
%             active due to macro names inverted (\@temp@<=>\@Fendfigure)
%             2) \@lim now global, otherwise there is never any label
%             in margin. This is (late) patch 96/09/17
%         \labelsinmargin corrected to allow many \label in a figure
%             or a table.                                        --bg 96/09/12
%         An empty letter \address forced \signature to be flushleft,
%             defaultly \fromaddress is now let to \space.
%         A \footnote in a table's \caption was printed as in minipage
%             (as pointed by J.Andre). Now normal mark is printed and
%             text doesn't appear (too complicate...) but a message is
%             issued to the user.                                --bg 96/09/13
%         frpatch.sty 96/09/17 publicly released.
%         \nofrenchguillemets was forced for AmSTeX but \nofrenchguillemets
%             is known after \begin{document}. So each saved box containing
%             maths created before generated an \undefined message
%             as noticed by O.Michel. Expansion of \nofrenchguillemets
%             now differed in \everymath and \everydisplay.      --bg 96/09/23
%         \caption optional parm wasn't processed, as pointed by
%              O.Michel.
%         Messages now numbered in french.doc/sty.               --bg 96/09/27
%         \originaloutput created to output (active) chars asis.  --bg 96/10/01
%         "Mots clef" replaced by "Mots-cl\'e".                   --bg 96/10/02
%         \unnumberedcaptions{figure/table} added to help. This is
%             a global suboption of frenchtypography. It nullify the
%             according \listof... (figures/tables). It can be used
%             only once. Can't be turned back later in french.    --bg 96/10/03
%         You can use a format "OT1 a la french" ie with kbconfig, even
%             when using Babel, just say \usepackage[OT1]{fontenc} before
%             loading Babel.                                      --bg 96/10/15
```

```
%          \@lim now use \@@par (original \par) instead of \par, to
%             bypass a stupid loop over \@restorepar in frenchll test.
%          \@@par defined for Plain as alias of \par.          --bg 96/10/29
% This version V3,47 now released for Mac and PC GUTenberg distribs.   96/10/29
% V3,48 \@@par definition, \@ifundefined incomplete: {else} missing
%             as pointed by Frederic Boulanger.                --bg 96/11/22
%          A macro \closingsmall was suggested by Th. Bouche to reduce
%             the amount of \medskipamount between closing and signature;
%             This is \fclosing[n]{...}
%          Temporary patch for LaTeX 961201beta due to \reverved@f undefined
%             in various (?) situations of letter class.
%          Reported bug 2341 has a correction in letter.cls:
%             \def\@nobreakcr{%
%              \let \reserved@e \relax
%              \let \reserved@f \relax
%              \vadjust{\penalty\@M}\@ifstar{\@xnewline}{\@xnewline}}
%             thus i remove my own patch.                      --bg 96/12/02
%          Babel 3.6 has no more \babel@core@loaded. Few adjustements
%             for babel 3.6.                                   --bg 97/01/02
%          Superfluous \smallskip after lettrines. Little vertical space
%             missing when lettrines are followed by \section, why?

% V4,02 Major french commands now forbidden before \begin{document}
%           as it was said, for years, in the documentation. This was
%           tested with the new file french.all.
%        \sommaire not executed if \tableofcontents is not defined.
%        \annexe(s) and \glossaire(s) not executed with letter class
%           (more precisely if \chapter undefined).             --bg 97/07/23
%        \texttt used in \index generated in .idx file a command
%           name with @ character(s). This creates problem for makeindex
%           or at least doesn't give the good result (pointed by
%           D.B.Roegel).                                        --bg 97/07/24
%        As Babel introduced \selectlanguage cmds in aux files, people
%           complain (like C. Wagner) that the message isn't clear
%           enough when they don't use Babel the next time. Thus i
%           introduce a file integrity checker in the .aux file to be
```

```
%           clearer when previously used via french only or via
%           babel+french.                                    --bg 97/08/26
%        \refmark was bugged, due to the fact that it calls \ref
%           which force \itshape in a french table and using \itshape
%           in math mode is a LaTeX error. No need of \itshape here.--bg 97/09/11
%        \bgroup...\egroup replaced by \begingroup...\endgroup in
%           the table environnement to avoid that giving an endgroup
%           caracter between begin and end don't generate any error.
%           This point was reported by D.Roegel.                --bg 97/09/16
%        Removed empty {} from "; : ? !" expansions (generated a wrong
%           blank space in maths).
%        \sommaire corrected to take arg in account (bad mod on
%           97/07/23).                                          --bg 97/09/29
%        A day try to run friendly with the polyglot package but
%           found no issue to the sample test in OT1, no solution to
%           the \pg@begin command in glossary file, as well as for
%           unfilled toc, lof and lot file.                     --bg 97/10/08
%        \allowhyphens introduced for use in a compound word for
%           example to obtain all hypenation points, like in
%           "socio-\allowhyphens culturel". This was pointed to me
%           by P.Perichon.                                      --bg 97/10/23
%        Pass option french to known packages. \@xtrasfrench code
%           added if any (equal to \extrasfrench outside babel).
%        Allow "french" to be a global option.
%        Use \RequirePackage to load latexsym.                  --bg 97/10/31
%        Removed begining space in \partname when the part has
%           no valid number.                                    --bg 97/11/05
%        \slidename now defined (targeting seminar).            --bg 97/11/18
%        More on hyphenation: inside \hyphenation the macro \- is
%           exacly like a blank space, thus allowing separated words
%           of a compound word to be hyphenated if \allowhyphens is
%           used. Notice that \allowhyphens is put before or after
%           the hyphen char depending whether you like hyphenation
%           of the preceding or the next word component. \allowhyphens
%           can only be used inside usual text, not inside the cs
%           \hyphenation.                                       --bg 97/11/19
%        \ifWTS set defaultly to \iffalse rather than undefined.
%        \languagename now initiated for mlp.
%        \fr@addto replaced by LaTeX macro.
%        {pm}french.cfg now loaded if any.                      --bg 97/11/24
%        Allow \everyparguillemets to end in a inner environment but
%           then \endguillemets should be used in the valid environnement.
%           Notice \endguillemets ends the group correctly, before
%           that the group remains open.                        --bg 97/12/04
%        Original \parindent now saved and restored.            --bg 97/12/05
%        \seealso didn't generate |see in the .idx file, due to...
%           History says: "\subsee no more protected by \string V3,47".
%           Protection now reestablished.                       --bg 97/12/18
%
% This version 4,02 is now released.                           --bg 97/12/18
% V4,02+ \everyparguillemetsremoved now added, allows the user to switch
%          off \everyparguillemets (\noeveryparguillemets wasn't the opposite
%          action).
%        \verb was protected for 2.09, now removed.
%        When used with fancyvrb, footnotes aren't modified.    --bg 98/01/16
%        Introduce \notesname for endnotes.sty.
%        Error-stop message when 2.09 emulation.                --bg 98/01/20
% V4,02b due to changes in *.kbc, kbconfig and mlp.             --bg 98/01/27
%        Accent macros mods only for MlTeX console 8bits output.
```

```
%          Now released, after various tests on T1 installations.   --bg 98/01/30
% V4,02c \CheckSevenBits added to verify, when needed, that
%          documents are converted to 8bits codes.                 --bg 98/02/04
% V4,02cy Y&Y requested to be able to use LY1, so i use now
%          \guillmot* and \textdegre if defined.                   --bg 98/02/17
% V4,03  Misplaced \fi after \RequirePackage{latexsym}.
%          \nofrenchguillemets should be \relax before
%          \begin{document} for AmS classes.
%          \CheckSevenBits adapted to inputenc too.                --bg 98/02/27
%          \@captype and \endtable* now defined with ams classes.  --bg 98/03/02
%          Caption style "\`a la french" for AmS styles too (but not
%            for AmS document classes), pointed by P.Kerlirzin.
%          "Sommaire" wasn't printed with AmS classes.
%          "Annexe" now printed instead of Chapter, with AmS classes
%            (though it detroys \chaptername).                      --bg 98/04/06
%          \glossaire(s) corrected for AmS classes.
%          Changes in \captionnames for AmS classes: \partname
%            redesigned, added \Ordinale, suppressed \@RPt and
%            added \@RPtNoInToc and \@RPtNoInDoc to remove part
%            number at each place, if any.                         --bg 98/04/07
%          As there is nowadays a language.dat file on each site and
%            that it's obvious to add the line for the french language,
%            a check is added if the french language was not defined in
%            the format and then issue a warning. This was pointed by
%            Thomas Esser.                                         --bg 98/04/15
%          \usersfrenchoptions reset @ to other, which was an error
%            inside style files, as pointed by D. Larchey-Wendling.
%            \makeatletter now protected by  group.                --bg 98/04/16
%          Keywords environnement was nullified by \maketitle when
%            using AmS classes; \maketitleaction  now isolated.
%          Print \kwname in small caps with AmS classes as usual.
%          Footnote marker spacing corrected for AmS classes.      --bg 98/04/24
%          "xxx yyy" abbreviations were wrongly rejected, as mentionned
%            by M. Caprace. Put inside a group.                     --bg 98/05/15
%          Processing .dtx with french was not exactly giving the
%            correct output, as stated by D. Barbier. So \DocInput
%            is now redefined in the same way as \originalinput was.
%          \textdegre was checked in place of \textdegree, thanks
%            to D. Barbier again.                                  --bg 98/05/27
%          For the polyglot package, J. Bezos send just the few mods
%            to allow it to run correctly with french.
%          \ordinal, \ordinale and \Ordinal now also provided.
%          Don't redefine \keywords except for AmS classes.        --bg 98/06/10
%          \frenchtrivsep defaultly sets the vertical spacing in
%            \@trivlist. \nofrenchtrivsep restores the original
%            \@trivlist.                                           --bg 98/06/11
% V4,03b \bibcite with hyperref package requested that its argument
%            were fully expanded, so \@gM@ has now one more level
%            of expansion. D. Roegel gave me a concise example.    --bg 98/06/26
%          \dospecials saving moved to \begin{document}. There was
%            a pb pointed by D. Roegel, with ltxdoc.cls which force
%            \AtBeginDocument{\MakeShortVerb{\|}} and the modify the
%            \dospecials macro. Now french will see the mod.       --bg 98/07/06
% V4,04  \ordinal(e) had a wrong \ifcase (\else missing). Thanks
%            to D. Roegel for the report.                          --bg 98/07/15
%          \fussy changes \hfuzz but also \vfuzz, which is wrong
%            for us when a class like AmSbook set it to another
%            value. Now \vfuzz is unmodified at all.               --bg 98/07/16
%          \array and \eqnarray modified to be able to disallow
```

```
%              french guillemets with \noguillemetsinarrays option.
%              Default value still remains \guillemetsinarrays.      --bg 98/07/17
%          With Babel we had: "You have requested package 'french',
%              but the package provides 'latexsym'". Now corrected.  --bg 98/08/03
%          Wrong usage of \guillmot* instead of quotes in T1 with
%              \noenglishquote. Coding was misplaced.
%          French banner wrongly output when ot1enc just loaded.
%          7-bits output messages forced when ot1enc just loaded too.-bg 98/08/06
%          French guillemets can switch from OT1 to any font, and
%              reversely. Package latexsym allways loaded.
%          \noguillemetsinarrays now applys to the array package.    --bg 98/08/07
% V4,04a Message "fermeture prematuree des guillemets" when using
%              \nofrenchlayout, as pointed by L. Bonnaud, is removed. --bg 98/09/10
%          \lettrine commands used erroneously \lsc to force smal caps
%              font usage, as pointed by T. Bouche. Now replaced
%              by \scshape.
%          \figurette no more defined when \figure is not (like
%              in the letter document class).                         --bg 98/10/02
%          \@ufo was wrongly set to \empty when already initiated.
%              This was pointed by J. Andre and P. Louarn.            --bg 98/10/07
%          As J.P. Lesot and M. Alissali reported to me, two more
%              package macros needed to be protected against char.
%              activation, \inputlisting and \url resp.               --bg 98/10/07
%          \@lim@ undefined message due to previous modification
%              on \figurette (badly) undefined when no \figure cs.    --bg 98/10/30
%          \@dblarg def ending } missing.                             --bg 98/11/10
%          French was partially activated when loaded after AmSTeX
%              and color, producing stupid errors like \@finput undefined.
%              (reported by M. Bovani using bonjour.tex).
%              This was due to \@tempc=\if. Is it an AmS bug? Bypass
%              introduced.                                            --bg 98/11/12
% This version is now definitely released for Mac-GUT.                --bg 98/11/12
% V4,04b \proofname now translated, as proposed by D. Barbier.
%          New cs \captionfont introduced as \emph for S. Dufour.     --bg 98/11/13
%          Spacing after a math comma is nullified. Use e.g. \textrm
%              within a formula to have the usual textual spacing.    --bg 98/11/17
%          The envir. listing from package listings now processed
%              in english. \inputlisting corrected with first argument
%              optional). With help of M. Alissali, thanks.           --bg 98/11/18
%          As pointed by D. Perret, french is not running with the
%              minimal class. I issue a message and stop immediately.--bg 98/12/14
%          Used before \begin{document}, \frenchguillemets and
%              \nofrenchguillemets generate now the same message
%              (was pointed by D. Perret too).                        --bg 98/12/15
%          \special redefined at \begin{document}, not before to
%              allow correct loading of TeX4ht package.               --bg 98/12/16
%          Copyright is modified for commercial resellers.
%          Since GUTenberg no more provide support of the French package,
%          GUTenberg is no more cited as the author in the banner and
%          the Copyright is now changed for 1999.                     --bg 98/12/17
%          \figurette was always undefined. Misplaced \else.
%          A try to detect blank after > or < with \@bobeyspaces
%              but unable to run within \if cs, so wait for a better
%              solution.                                              --bg 99/01/04
%          Renaming \@@LG by \@LG. Renaming \@@RG by \@RG.
%              Introducing \RG@ as the internal
%              alias for closing guillemets. \nofrenchguillemets now
%              nullify eight bits guillemets and the guillemets
%              environnement.
```

```
%           \ly now do nothing when \nofrenchguillemets is active.
%           \OT1\guillemot... don't use lasy when \nofrenchguillemets.
%            All *.kbc now map 8bit guillemets to \guillemot*        --bg 99/01/07

%       \pageref now twice protected and allowing to execute
%           the original macro in a non french typographic
%           environment.
%       Warning 58 added for people modifying the vertical spacing
%           in a list environment.                                  --bg 99/09/14
%       Warning 58 removed for environment verse, quotation
%           and versatim.                                           --bg 99/09/16
%       Warning 58 removed for environment keywords.
%       \frenchtrivsepwarnings introduced as the default. One can
%           ask \nofrenchtrivsepwarnings when he is making new
%           environments based on quotation or verse and he wants
%           \frenchtrivsep do its job.
%       New internal part \frenchwarnings. \nofrenchwarnings can
%           stop messages to be issued by french.                   --bg 99/09/20
%       There was a loop in \kbtypeout when loading french.cfg
%           (due to the fact that not all french features are not
%           still available). Now \kbtypeout should no more issue
%           another warning message.                                --bg 99/09/21
%       \@gG now can redefine any macro having more than 1 required
%           argument (but no optional one) and up to 3 arguments.
%           This is the "//" option. Last arg of \@gG now in use.
%           Internal macro \atgMat removed.
%       \cite redefinition corrected with an explicit optional
%           arg ("1").
%       \vpageref redefinition with explicit 2 optional args.
%       \bibcite was generating an error (missing \endcsname) when
%           reading .aux file after \end{document}. This was due to
%           the use of \select@language by Babel which should not
%           be in use there for french.
%           \bibcite and \newlabel redefinitions removed and replaced
%           by \@newl@bel with explictly "//" option.
%           \@newl@bel redefined also at \end{document}.
%       Warning -58- now ignored for abstract and resume.           --bg 99/09/22
```

```
%         \emailname added for the letter class.                --bg 99/09/23
%       Allow user to add more typesetting at the end of the last
%          page, at the begining of \enddocument, via a macro name
%          \f@lastpage (defaultly undefined). This macro should
%          not be used elsewhere than in a document class.       --bg 99/09/24
%          When one wants to let the original LaTeX processing
%          apply at \enddocument one could say:
%          \let\f@lastpage\nofrenchlayout                        --bg 99/09/27
%       Correction of wrong usage of \mathrm in \numeros and
%          \Numeros.
%       Warning 58 removed for environment resume.               --bg 99/10/04
%       Avoid LaTeX bug when issuing a \wlog with accent macros
%          before \begin{document} in a standard format
%          (\accent@spacefactor=\undefined).
%       As suggested by M. Bovani message -29- is issued in OT1
%          outside any MlTeX featuring.                          --bg 1999/10/12
%       Pb at \begin{document} when loading varioref, as pointed
%          by P. Gaborit. This was due to \@ifpackageloaded which
%          can't run at \begin{document}. Code going back to its
%          original place and another test introduced at \document.
%                                                                --bg 1999/10/25
%       \vpageref was wrongly redefined via \@gG with an empty
%          first argument. Pointed by P. Gaborit.
% This version is released.                                      --bg 1999/10/26
%       Jose Grimm proposed modifications to the abbreviation
%          mechanism, allowing french abbreviations in titles
%          as in (fancy) headings. I also added few code to
%          allow "name" and "Name" to have defaultly the same
%          abbreviation (the first letter is no more tested,
%          except if coded {Name} in the abbreviation file).
%       As shown by J. Filleau the lineno package lost its       --bg 1999/11/08
%          line number in a \lettrine par, due to the use of
%          the original \par cs (saved in \f@par). An usual
%          \par now added before this one, allowing the lineo
%          package to count correctly.
%       \backcite was not correctly redefined. Pb reported
%          P.A. Blanche. Now 2 mandatory args.                   --bg 1999/11/12
%       Again J. Grimm reported serious bugs: "1" was used
%          as file number in various cases of french. This
%          absolute number is sometimes wrong. He suggests
%          to use LaTeX \@inputcheck. Done and OK, thanks.
%          The package changebar used also "1" at the same
%          time than french, so it's solved here too, but
%          don't exclude to correct changebar...                 --bg 1999/11/19
%       There was a pb with seminar when using slides. This
%          was due to the still unmodified latex209 output
%          routine which doesn't set \protect to the appropriate
%          value of \noexpand. Denis Girou made the hack
%          in the version 4.1a of the seminar class but
%          unfortunately it was never publicly provided.
%          Since i don't see any evolution in the near future
%          i've tried a dirty hack in \shipout. I hope it
%          will never introduce any drawback.                    --bg 1999/11/23
%       \OT1\guillemotright had a misplaced \unskip.             --bg 1999/11/29
% This version is released.                                      --bg 1999/11/29
% pr\'e-V5,00:  (continuation)
%       When using \fnsymbol in footnote markers they should be
%          placed higher on the footnote line. This point was
%          reported by P.A. Blanche.                             --bg 1999/12/03
```

```
%           \unnumberedcaptions could not be used twice, firstly
%               on figures, secondly on tables, as reported by
%               F. Petit.                                      --bg 1999/12/06
%           The previous seminar patch should not apply with the
%               article option. F. Boulanger provided the mods.
%           \tilde wasn't running with AMSLaTeX V2, as shown by
%               T. Bouche. Expansion pb solved.                --bg 1999/12/10
%           Few stuff added at \end{document} to allow TeX4ht
%               expand the \edef\:temp{\end:frames}.           --bg 1999/12/13
%           Old package moreverb now checked for \listing.     --bg 1999/12/21
%           A default \topskip of nearly 2cm was added by amsbook
%               class when using the french pagestyle (\thispagestyle).
%               This is a boggy feature i guess... thus i reset
%               \topskip with \normaltopskip.                  --bg 1999/12/22
% This is the Christmas' release.
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
%           \backslash was not pdf (bookmark) compatible, as shown
%               by M. Bovani.                                  --bg 2000/01/13
%           As pointed by M. Bovani again everypar opening guillemets
%               had a quite different spacing after them. Also worst
%               at a second level everypar opening guillemets. This
%               one is removed and the former is reduced, but don't know
%               at this time why spacing differ when font size decreases.
%                                                              --bg 2000/01/21
%           \frenchdoc changed bec. renaming .doc files.       --bg 2000/03/03
%           Allow breaks after a \lettrine (M. Bovani pointed to me
%               a spacing pb reported by a Mac-GUT user when a sectioning
%               command arrives just after a lettrine paragraph).
%           As 8bit opening guillemets generate \guillemotleft{} there
%               is an empty bloc to remove when we are working
%               \untypedspaces with still a real space; otherwise
%               spacing is wrong. That pb was alive for at least december
%               1998. Now solved within \fguillemets defined with one
%               argument (removed when \empty).
%           \fguillemets and \endfguillemets (never announced) replaced
%               by \f@guillemets and \endf@guillemets.
%           Unusual set of \labelsep to 0.1em in the order env. removed.
%               Pointed by M. Caprace.
%           \AllTeX logo redesigned to get a correct A size.    --bg 2000/03/08
%           Suggested typing of "etc." now "~etc." because "etc."
%               should never occur at the begining of the line.  --bg 2000/03/13
%           The package hyperref didn't care of \thechapter which
%               is allways defined with french; bypass introduced
%               to avoid duplicate section number warning.      --bg 2000/03/15
%           As Heiko Oberdiek answered with a correction in hyperref
%               v6.69f i remove my bypass.                      --bg 2000/03/17
%           \ifFLA wasn't defined for the early messages about
%               double punctuation (-13-).                      --bg 2000/03/20
%           amsart class typeset final text (author affiliation and email)
%               at the last \clearpage at the \@documenthook time
%               but, unfortunately,_french_ generates its own \clearpage;
%               thus the text is printed one page later. That effect
%               can be bypassed with a \nofrenchlayout before the
%               \end{document} but, i confess, this is not the final
%               solution to that pb. The major pb to solve this question
%               is that LaTeX should have at least 2 hooks for \end{document},
%               one for last page typesetting and one for other internal
%               settings which have no effect on the current pass.
%               This pb is still under consideration (see below).
```

```
%           \nofrenchtrivsepwarnings generated "Extra }, or forgotten
%               \endgroup" due to a misplaced ending group.        --bg 2000/03/29
%           \etc. now defined to avoid break before it.            --bg 2000/04/14
%           \see redefined for index.sty because it emphasis
%               \seename which is IMHO a wrong design choice.       --bg 2000/05/16
%           Abbreviations errors corrected:
%               - message 22 issued even abbreviation found;
%               - any name containing an accentuation macro was
%                 never abbreviated when using mltex option because
%                 the resulting 8bits char wasn't a letter (correction
%                 made in kbconfing via \Recycle macro).           --bg 2000/06/14
%           As AmS article can print few material after the \end{document}
%               i defer the \clearpage at end of \@enddocumenthook.
%           The opening guillemets of a citation with \noeveryparguillemets
%               should start the paragraph/line; if not, a newline is
%               forced at the opening guillemets. This process will avoid
%               terrefic badness to occur.                         --bg 2000/06/15
%           \OT1\textbackslash_ added to print the correct glyph with the
%               tt font but just with \frenchtypography.

%           \nofrenchguillemets should be \relax with frenchle
%               (pb reported by J. Grimm).                          --bg 2000/07/12
%           Tested \listing definition of moreverb package wasn't
%               up to date.                                         --bg 2000/08/28
%           html.sty has a \newcounter{chapter} which is executed
%               when \c@chapter is undefined but not define \chapter.
%               As we test if \chapter is undefined to do the same
%               \newcounter, a duplicate name occures. So we change
%               the test to \c@chapter.                             --bg 2000/09/05
%           Message to use \*mathcomma and \*warnings
%               after \begin{document}.                             --bg 2000/09/06
%           Now loading bibliography translated titles from files
%               <language><BibliographicPackageID>"bib.tex". The package
%               ID is either previously initiated otherwise deducted
%               from known packages ID. Currently we know the jurabib
%               package. When no package is provided the files frbib.tex
%               and enbib.tex are loaded. They introduce \bibsfrench and
%               \bibsenglish the names which contain the appropriate
%               definitions [formerly given by the frbib package (thus now
%               obsolate)]. \bibsfrench and \bibsenglish are thus executed
%               in their language context. This should be generalized to
%               other langauges.                                    --bg 2000/10/25
%           \clearpage \AtEndDocument should be done in French.
%           Mod. of 2000/03/08 regarding \f@guillemets with one arg.
%               was not running with input encoding package because
%               \IeC{\guillemotleft} breaks (no arg.). Argument removed.
%               8bit opening guillemets should now expand to
%               \csname guillemotleft\endcsname.                    --bg 2000/10/27
```

```

%               LaTeX because French mods were not made global.  --bg 2001/06/21
%           PdfTeX (level 13d) strange bug: \pdfannotlink crash
%               comming from a \ref (supposed to be not in horizontal
%               mode). \refmark modified to call \ref inside \textrm.
%               Users having the same pb with \ref should also insert
%               it in a \textrm or in AmS \text macro.       --bg 2001/07/02
%           Applying correction made on the lite version regarding
%               bug when more than 9 languages were defined in the
%               language.dat configuration file. frenchle.sty now
%               upgraded to level V5,02a. File hyconfig.tex does not
%               need any correction.                        --bg 2001/07/20
%           Added auctex.pdf in supported engines; thanks to
%               Frederic.Petit@univ-mlv.fr for that file.    --bg 2001/09/11
%           Few corrections in fxabbrev.tex
%           New case of "corrupted language.dat" message: when
%               \french is not redefined after language.dat reading. --bg 2001/09/20
%           \degre definition was too much expanded; there was no
%               more test of \(no)frenchmacros.
%           Message -8- footnote text lost added when in math or
%               in a \mbox.
```

```
%         \includegraphics now protected against active chars.    --bg 2001/09/21
%         With pdfTeX a duplicate \annotelink occured with \sommaire.
%            Bypass found was to \relax \selectfont.
%            Pb not reproduced with a different installation
%            so, no modification applied.                          --bg 2001/09/26
%         Modified \mbox was wrongly expandable in all situations;
%            now it's protected, eg in \section.
% V5,04 Message -8- enhanced to recall that \footnote should
%            be protected in moving arguments.                     --bg 2001/10/19
%         As suggested by Bernard Alfonsi the \captionseparator
%            needs to be emptied when there is no text in the
%            \caption argument.                                    --bg 2001/11/19
%         In all cases where \fsc and \lsc can't find any sc font
%            we can now force the sc font of \rmfamily using
%            \fsc* or \lsc*. That is in force, defaultly, for OT1.
%         french.ldf modified to allow french to be loaded
%            before babel.                                         --bg 2001/11/27
%         Bernard Alfonsi suggested that french use the same
%            processing as icomma.sty. Basically i don't want that
%            space be added defaultly in various math circumstancies.
%            So i just modified french to accept the icomma package
%            do it's job when \french is activated.                --bg 2001/11/29
%         Due to resetting of chapter counter at part change we
%            have to better qualify the chapter anchor names with
%            hyperref package. Thus we added \arabic{part}. The
%            original problem (bookmark not indented) was reported
%            by Evy Kersalé but the main problem was a duplicate
%            pdf link.                                             --bg 2001/12/05
%         Bernard Alfonsi reported a problem when titlesec 2.4
%            or higher was loaded: French indentation allways apply
%            to the first paragraph. Now when titlesec package is
%            loaded we respect now the user's choice between
%            "indentfirst" and "nonindentfirst" options.
%            Thus we introduce two new French commands
%            which are \indentfirst and \nonindentfirst.           --bg 2001/12/05
%         Code about \@PresrveBraces has no meaning with frenchle.
%         French banner showed \accent primitive when fontenc was
%            just loaded before; accent removed.
%         \addto definition provided if not allready done by babel
%            or any other package.
%         \noresetatpart added for frenchle.                       --bg 2001/12/10
%         \edef in \showhyphens needed to be protected, otherwise
%            \showhyphens{\emph{x}} produced a "Missing control
%            sequence" message due to \inaccessible.               --bg 2001/12/13
%         \frenchmathcomma should only change typesetting
%            when \frenchtypography is in force.                   --bg 2001/12/14
%         Successive \footnote or \refmark were not processed
%            correctly due to implementation of \futurelet.
%            Added \@ifNextNBc to allow testing of 2 alternatives.
%            Suppressed definition of \@ifnextchar.
%         \nofrenchlayout disappeared from frenchle.               --bg 2001/12/17

%           abbreviation file for plurals.                  --bg 2002/01/21
%       Seven bits output messages forced when OT1 font encoding
%           loaded over a french format.                    --bg 2002/01/22
%       Removing use of \textdegree which is only defined in TS1
%           as well as \char'6 and \char'27 which where font
%           encoding dependent.                             --bg 2002/01/23
%       \@makecaption should not expand second parm, otherwise
%           extra \else occured with hyperref (as pointed by
%           Tristan Lorino).
%       License correctly output with upper case letters in
%           "French Pro".
%       No comma was added beetween consecutive footnotes (or
%           \refmark(s). \@Fifnchc didn't execute code when
%           test condition was true.                        --bg 2002/01/31
%       New command: \noresetatchapter to avoid footnote
%           counter to be reset at chapter change.
%       \noreset... commands now controlled by \*frenchlayout.
%       \printindex modified to be a valid anchor for hyperref
%           documents. (subparagraph counter modified).
%       Bibliography environnement "thebibliography" modified
%           to be referred in the table of contents et be a valid
%           anchor when using hyperref.                     --bg 2002/02/04
%       Translate names for the "algorithm" package.
%       Let \bibname undefined if not already defined.
%           Use \refname instead in thebibliography env.    --bg 2002/02/06
%       New command \guillemetsfont to allow the user to choose
%           any font for typesetting guillemets in a T1 font
%           encoding French Pro running scheme.             --bg 2002/02/13
%V5,05  \kbtypeout modified; no need of \@kbEdef but
%           \nofrenchtypography should apply.
%       \kbtypeout is now fully operating.                  --bg 2002/02/25
%       Letting \@nobraces be LaTeX \@firstofone.
%       \@kbtypeout should have a {} to gobble.
%       \IeC from inputenc made not expanded in \kbtypeout when
%           package inputenc loaded erroneously. This will just
%           avoid LaTeX to fail but screen/log output will not
%           be so readable...                               --bg 2002/02/28
%       Introducing \kbIO as a more general macro to input text
%           and output it somewhere.                        --bg 2002/03/01
%       \captionsfrench now tests \ifFTR (frenchtranslation).
%       French \textcurrency is now \texteuro.              --bg 2002/03/04
%       Let \@kbspecials run only when 8bit output.         --bg 2002/03/05
%       As shown by Bernard Alfonsi, the \captionseparator
%           is erroneously typeset when using an empty
%           caption text with the picinst package. In fact there
%           was a test for that in \@makecaption but it tested
```

```
%                 only one argument which inadequate for picinst.    --bg 2002/03/22
%         A problem was reported by Christophe Ancey showing that
%                 natbib, when used with option "compress", required
%                 unexpandable \mbox, so the original definition of
%                 \mbox is reset in the \@citex in use.              --bg 2002/04/10
%V5,06 \nombre modified to be running inside arguments of
%                 macros (pb was reported by Bernard Alfonsi).       --bg 2002/04/26
%       The syntax package is not correctly using < and > in
%                 macros definitions; so these symbols should be
%                 allways chars.                                      --bg 2002/04/29
%V5,07 \captionseparator was never generated as shown
%                 by Frédéric Dupont.
%          \providespackage text modified.                           --bg 2002/05/23
%V5,08 Modifications for TeX--XeT and hebrew package:
%          - hebrew changed \verypar, wrongly.
%          - when switching to french set LR.
%          - only the first \everypar should set LR.
%          - extra \endL at \endfrench removed.
%       Added message -71- to avoid problem of loading French
%          alone after babel and outside the scope of babel.
%       Wrong call of \@kbtypeout when keyboard package is
%          already loaded.
%       \dGs macro from keyboard.sty should be \empty when orignal
%          macro definitions are modified for active chars; thus
%          i've reset it inside \@Fstr.                              --bg 2002/08/01
%       Numerous extension to makefiles ; unix support under
%          dos/windows.

%       Don't require msg.sty when compiling the license file. --bg 2004/06/28
%V5,93 Testing beamer shows that the \endtable part of FrenchPro
%         is not activated at all. So, i call now \@Fendtable and
%         also \F@endfigure in a modified \\table (and respectively
%         in \\figure) macro of beamer.
%         \l@chapter nullified with the beamer class.
%         Added \captionseparator process.             --bg 2004/07/28
%       Pb reported by Andre Valentin with the diagxy package
%         (the entire \square graphic was missing),
%         was due to the call to XY-pic which use ':' as a
%         syntax delimiter. I choosed to disactivate ':' and '<'
%         at the beginning of the xy environnement.
%       "french" language option passed to the "msg" package
%         except when FrenchPro is called by Babel.    --bg 2004/08/02
%       \NouveauLangage, message 27: ##1 replaced by \l@no to
%         be easier to forward argument to "msg" package.
%       The message -9- could not be issued when a \NouveaLanguage
%         call is in erreor since \f@ERRdat was undefined at this
%         level. Loop over \enddocument, replaced by \@@end as final
%         alias of \french.                            --bg 2004/08/04
%V5,94 Introduced \MakeRobustCommand to be used all along and
%         specially to protect language macros. This is to avoid
%         infinite loop with jurabib package when switching to
%         another language inside a bibliographic entry of the
%         BibTeX data base. Pb reported by Frederic Connes. --bg 2004/09/10
%       Message 81 issued when the "msg" package is not found.
%       EightBitOutput setting misplaced.              --bg 2004/09/14
%V5,95 When using the jurabib package \cite reset \ifFTY to
%         undefined and so afterwards any command using \ifFTY
%         produced a crash. This was reported by Frederic Connes.
```

```
%       He also reported a pb where \footcite didn't act as a
%          French \footnote, this was due to \@ifFTYfalse which
%          could not be used recursively. So i set \if@Back like
%          \ifFTY in \[no]frenchtypography and removed \if@Back
%          setting in \@ifFTYfalse.                        --bg 2004/10/01
%V5,96 Introducing \if@mid@expandable to allow partial expand
%          of "<<" and ">>" in usual \edef or alike.
%       Don't issue redefinition message for \nombre.      --bg 2004/10/06
%       Hyperref pb reported to S. Rahtz when using
%          \MakeLowercase in \section. Unfortunately \ieme, \fup
%          and co used it. Heiko Oberdiek just suggested to insert
%          \pdfstringdefDisableCommands{\let\MakeLowercase\relax}
%          which is not fully satisfactory. I just apply \fup
%          when in a \frenchtypography context (since my
%          \pdfstringdef is testing \ifFTY).               --bg 2004/10/08
%       Heiko Oberdiek introduced my mid expansion in the command
%          \pdfstringdef with \let\if@mid@expandable\@firstoftwo.--bg 2004/10/11
%V5,97 \numero & co now \protected (bug reported by the best
%          FrenchPro tester of the year: Frederic Connes).  --bg 2004/10/12
%V5,98 \bibitem should also be protected against ":" in its
%          argument; so i added it to the list in \@Fstr. This
%          pb was again reported by F.C.                    --bg 2004/10/18
%       \@LiN and \@LiB now redefining ":"
%       Jurabib \@lbibitem now using \protected@edef.
%       Still unsolved: \fullcite which doesn't apply the
%          French typography to the citation text.
%       Keyboard.sty was erroneously calling \nofrenchtypography
%          inside \kbIO which is wrong before \begin{document}
%          and also when not used in French; so removed.
%       \kbIO used after \begin{document} should request
%          \nofrenchtypography only if it was activated.
%       Added macro \@Fw to replace \message ones (24, 25,
%          65, 26 and 18).                                  --bg 2004/10/19
%V5,981 As chown F.C. when using bibtopic, a message
%       "Package bibtopic Error: Found unknown 'thebibliography' environment."
%          was issued, due to the coding of \thebibliography.
%          Bibtopic requires that the first 3 tokens of
%          \thebibliography macro content were available asis.
%       By the way our \bibitem macro should be provided to
%          bibtopic (as well as \thebibliography). It's bibitem
%          (\\bt@@item) should be protected too.
%       \@gM@@@ was bugged and generated {#2} in place of [#2]
%          whith #2 empty.
%       \frenchpack added. Message -42- modified.
%       Mods for TeXLive 2004 tested by Andr\'e Valentin.   --bg 2004/11/18
%V5,982 \MakeRobustCommand applied on any language found
%          in the language.dat file.
%       New redefinition of \ifthenelse which was wrong, as
%          reported by Frederic Connes.
%       He also reported a bug when \cite[\quando={10}]{test},
%          thus i made \quando a robust command.            --bg 2004/11/29
%       As suggested by F.C. \ordinal will now give "second" when
%          there is no third item. \Ordinal ==> Second
%          \ordinale ==> seconde and \Ordinale ==> Seconde.
%          It requires \nofiles be absent.                  --bg 2004/12/06
%V5,983 \InputIfFileExist can't be used recursively; this doesn'ts984
%          allow to call the "msg" package for the information
%          messages. Thus \f@issue will now run inside a block.
%          (pb reported by F.C. as french.cfg not loaded).  --bg 2004/12/08
```

```
%V5,984 \@gM@@@ was bugged and generated [#2] even when #2
%        was empty. Test for empty introduced. Bug reported
%        by Maurice Lombardi who also reported about the MiKTeX
%        installation batch file. For MiKTeX the documentation
%        file msgdoc is now renamed msgdoc.tex since MiKTeX can't
%        find a file without extension.                --bg 2004/12/15
%        Mod. V5,983 removed. \InputIfFileExists now replaced
%        by \IfFileExists ... \f@input. I still don't have the
%        explanation why \InputIfFileExists is no more working
%        since a message from the "msg" package is issued
%        concurently.                                  --bg 2004/12/16
%V5,985 \sommaire modified to run with memoir.cls as suggested
%        by F.C.
%        As pointed by F.C. again, \index in a footnote was wrong
%        when used with package index.
%        Added \verbatimfile{...} if not already defined.    --bg 2004/12/29
%V5,986  F.C. rightly discussed the point that folio is still
%        printed at the beginning of chapter or part. This is
%        unusual in French typography. So i introduce the following
%        new commands:
%        \begingingfolio% default option (upwards compatibility)
%        \nobegingingfolio% to remove folio at beging of part/chapter
%        \frenchpagestyle% default option.
%        \nofrenchpagestyle% to let LaTeX/packages styles work.--bg 2004/12/30
%V5,987 F.C. suggested to add \aliaspagestyle{chapter}{empty} to
%        \nobegingingfolio for memoir.cls.
%        \@gM@@@ was still bugged; last test added was wrong
%        (\ifx##2\empty instead of \ifx\empty##2). Fortunately
%        the torture test contained \cite[pp ...           --bg 2005/01/03
%        Mods suggested by Harald Harders to let babelbib run
%        with frenchle (don't call \bibsfrench/english inside
%        \captionsfrench/english).
%        Force \ConstantLayout after \begin{document} as it was
%        documented in ALIRE.
%        Added \msgencoding in French messages file.          --bg 2005/01/05
%        Added \FileName and \theFileName for 8bits file names
%        or containing any active character.
%        Asked Harald Harders to add in babelbib:
%        \@ifpackageloaded{french}{}{\newcommand\bibsfrench{}}
%        \@ifpackageloaded{french}{}{\newcommand\bibsenglish{}}
%        to allow babelbib to run with FrenchPro.
%        Default \endtable* should not be \endgroup but
%        \endtable (pb found when typesetting frenchll).      --bg 2005/01/06
%V5,988 \ConstantLayout used with babelbib will pass option
%        fixlanguage if called before \begin{document}.       --bg 2005/01/06
%        Message #58 didn't protect its argument, as shown by
%        Laurent Bloch, \string added at each \@w@s call;
%        and for message #1.
%V5,989 Messages -25 and 29- corrected. The message -29- should
%        not be issued with the "7b" keyboard option.
%        Don't issue -29- if already done by kbconfig.
%        Various keyboard mods to allow 8b reencoding for messages
%        output.                                              --bg 2005/01/26
%        Since \english.sty set \languagename to English, i
%        forced messages in French when loading the FrenchPro code
%        and English at end.                                  --bg 2005/01/27
%        Added another msg -71- when babel loaded later.
%        As reported by A. Valentin:
%        ^^P and ^^Q introduced a pb with  the microtype package
```

```
%          and this was reported to the author; a bypass was
%            to comment the lines in .cfg file.
%        Microtype modification V1.6a applied by Robert Schlicht.
%        Added msg -87- to force babelbib not to be used
%            without babel.                                    --bg 2005/01/31
%V5,990 Default \smaller is not enough for \fup, so i introduce
%            \sm@llerthree which is defaulted to \scriptsize.   --bg 2005/02/11
%        New footmisc.sty, V5.3c (2005/05/02) is now running with
%            FrenchPro as tested with the "hang" option for
%            \footnotes.
%V5,991 If {} follows \ier, \ieme, \fup{..} and co
%            then no space is added after it.                  --bg 2005/02/16
%        F.C. suggested to reduce spacing when \fup is following
%            digit 1; star version of \fup done for that. \ier, \ieme
%            and co now using \fup*.
%            \halfnegthinspace kerning macro added.
%        \nombre modified in order to accept argument containing
%            any protected macro.                              --bg 2005/02/18
%        As suggested by F.C, \ier, \ieme and co are now
%            protected with \MakeRobustCommand.
%        Added new internal cmd \stop@mid@expandable for future
%            use.                                              --bg 2005/02/21
%        Blank spaces missing in -29-                          --bg 2005/02/28
%        As shown by a report from F.C. the lastpage package
%            executed a \clearpage \AtEndDocument but this was
%            too early if the document had only one page. So, i
%            nullify the \clearpage until FrenchPro execute its
%            own \clearpage (only for the lastpage package).
%            The test file used the fancyhdr package to put
%            special text using FrenchPro macros (speciall \ier).  --bg 2005/03/02
%         Since \lastpage@putlabel was modified by hyperref,
%        the lastpage processing is defred at \AtBeginDocument
%            and page counter mods are nullified.
%        Message -34- modified.
%V5,992 Important change kbconfig V6,10: accent macros mods.   --bg 2005/03/09
%V5,993 Few changes in messages files and kbconfig.
%        Package Error when a user request 2 french options with Babel.
%         frenchle.ldf, frenchpro.ldf and french.ldf modified.   --bg 2005/03/21
%V5,994 Added \og and \fg from frenchb.ldf 2004/04/02 v1.6f
%        for compatibility, especially for Lyx users.
%        Added \frenchbguillemets and \nofrenchbguillemets.    --bg 2005/03/24
%        Important changed of kbconfig (V7,00).                --bg 2005/04/15
