

Intro to xml2rfc

The screenshot shows a web interface titled "Convert Your XML Source". It is divided into several sections:

- Input Source:**
 - File:** A "Browse..." button and the text "No file selected."
 - URL:** An empty text input field.
- Output format:**
 - Text:** Radio buttons for "plaintext" (selected), "as PDF", and "unpaginated".
 - Web page:** Radio buttons for "HTML", "as PDF", "RfcMarkup", "as PDF", and "ePub".
 - Other:** Radio buttons for "nroff" and "expanded XML".
- Options:**
 - Output result:** Radio buttons for "Use frames to show Warnings & Errors" (selected), "Window", and "File".

At the bottom right, there are "Submit" and "Reset" buttons.

20 July 2014

Toronto

What is xml2rfc?

A tool that:

- Converts an XML source file into a text, HTML, nroff, unpaginated text, or expanded XML file.
- Creates a document in the format of an Internet-Draft (or RFC).
- Is available from <http://xml2rfc.ietf.org> as a web-based service or for download.

Why use xml2rfc?

This tool:

- creates an Internet-Draft in the proper format
- inserts boilerplate text
- formats reference entries
- outputs various formats including HTML and PDF

You will have a source file that:

- can be used to exchange comments with coauthors
- can be used for metadata extraction
- the RFC Editor can edit

About xml2rfc v2

- The tool has been rewritten from scratch and is on the main page: <http://xml2rfc.ietf.org>
- It is stricter than v1 (more on this later)
- Start with a template
- Send questions to xml2rfc@ietf.org
- Report bugs on <http://trac.tools.ietf.org/tools/xml2rfc/trac/>

Initial Setup: Choices

- Use the tool on the web or install it locally.
- Use the citation libraries online or maintain a local copy.
- Edit in your favorite editor or use an XML editor such as XMLmind.
- With XMLmind, you can use Bill Fenner's add-on that provides a WYSIKN (What You See Is Kinda Neat) interface

<http://code.google.com/p/xml2rfc-xxe/>

Quick-Start Guide

- Use the tool online.
- Use the citation libraries online.
- Use your favorite text editor and edit raw XML.
- Start with a template

Templates

- Available here:
<http://tools.ietf.org/tools/templates>
- Recommend starting with:
 - For a generic draft:
draft-davies-template-bare.xml
 - For a draft containing a MIB:
mib-doc-template-xml.txt

Other Options for Creating an XML File

- xml2rfc I-D Creation Wizard

<http://xml2rfc.ietf.org/xml2rfc-wizard/>

- As mentioned, lyx2rfc lets you use LyX to create an XML file
- As mentioned, pandoc2rfc lets you use wiki-style markdown to create an XML file

XML Basics

<outer>

...

<inner>

...

</inner>

...

</outer>

- **Elements** are nested
- Matching start and end tags
(or simply an empty tag, e.g., <organization />)
- **Attributes** have quoted values
- Case-sensitive `<author initials="J." surname="Joyce">`
- Use < for < and & for &
- See “XML basics” for more details

http://xml2rfc.ietf.org/authoring/draft-mrose-writing-rfcs.html#xml_basics

Overall Document Structure

`<rfc>`

front

author

abstract

middle

section

t, list, figure

back

references

`</rfc>`

See the DTD for details!

Creating an Internet-Draft

- Make an author element for yourself
- `<t>` tags around paragraphs
- `<figure><artwork>` around figures
- Enter references as
`<xref target="RFCXXXX" />`
- Use citation libraries for references

Setting the ipr attribute

The transition to the current copyright (<http://trustee.ietf.org/license-info/>) led to additional options for the ipr attribute.

```
<rfc category="info" docName="draft-example-00"  
ipr="trust200902">
```

- **trust200902** **commonly used*
- noModificationTrust200902
- noDerivativesTrust200902
- **pre5378Trust200902** **used to add 6.c.iii paragraph*

See the IETF Trust Copyright FAQ for further information:
<http://trustee.ietf.org/docs/Copyright-FAQ-2010-6-22.pdf>

Author Info

Template for author info block:

```
<author initials="" surname="" fullname="" role="" >
  <organization></organization>
  <address>
    <postal>
      <street></street>
      <city></city>
      <country></country>
    </postal>
    <phone></phone>
    <email></email>
    <uri></uri>
  </address>
</author>
```

Using Lists

Use the style attribute of the list element:

`style="empty"`: simply indents list items. (default)

`style="numbers"`: 1., 2., 3.

`style="letters"`: a., b., c.

`style="symbols"`: bulleted with o, o, o

nested lists are bulleted with *, then +

You can control this with PI `<?rfc text-list-symbols="o*+-"?>`

`style="hanging"`: for text indented under a term

(using `hangText` attribute of `<t>` tag)

`style="format %d"`: for customized lists

Customized Lists

(1)

(2) is `<list style="format (%d)">`

(3)

(a)

(b) is `<list style="format (%c)">`

(c)

REQ1:

REQ2: is `<list style="format REQ%d:">`

REQ3:

What is CDATA for?

A CDATA block is left alone by xml2rfc. It does not try to parse XML inside of a CDATA block. (For example, if a figure contains "<", you don't have to use <) It is useful for including XML examples in the document.

```
<figure><artwork><![CDATA[
```

Here is a figure that mentions XML elements such as <xref>.

```
]]></artwork></figure>
```

Citing References

All are cited textually in the same way: using xref elements with the target set to the anchor of the reference element, e.g.,

XML	text
<code><xref target="RFC2119" /></code>	<code>[RFC2119]</code>
<code><xref target="I-D.ietf-roll-of0"/></code>	<code>[I-D.ietf-roll-of0]</code>
<code><xref target="IEEE.802-11H.2003"/></code>	<code>[IEEE.802-11H.2003]</code>

Inserting References

Use the citation libraries!

(available from <http://xml2rfc.ietf.org>)

citation library	retrieve entire directory as a file	retrieve entire directory using <code>wget -r -l 1 -A .xml -nd -nc ...</code>	rss feed	rsync
RFC	zip or tgz	http://xml.resource.org/public/rfc/bibxml/	rss 1.0	yes
Internet-Draft	zip or tgz	http://xml.resource.org/public/rfc/bibxml3/	rss 1.0	yes
W3C	zip or tgz	http://xml.resource.org/public/rfc/bibxml4/	rss 1.0	yes
JSF	zip or tgz	http://www.xmlpp.org/extensions/refs/	rss 0.92	no
3GPP	zip or tgz	http://xml.resource.org/public/rfc/bibxml5/	rss 1.0	yes
Miscellaneous	zip or tgz	http://xml.resource.org/public/rfc/bibxml2/	no	yes

Inserting References

3 ways to use the citation libraries

(details to follow)

1. The Short Way
Use a PI in the references section: `<?rfc include="reference.RFC.2119.xml"?>`
2. The Long Way
Define an ENTITY at the top and use `&rfc2119;` in the references section.
3. The Really Long Way
Include the complete reference element.

ALL yield the same text output:

→ `[RFC2119] Bradner, S., "Key words for use in RFCs to Indicate Requirement Levels", BCP 14, RFC 2119, March 1997.`

(1) The Short Way

Use a PI in the references section.

```
<?rfc include="reference.RFC.2119.xml"?>
```

→ [RFC2119] Bradner, S., "Key words for use in RFCs to Indicate Requirement Levels", BCP 14, RFC 2119, March 1997.

```
<?rfc include="reference.I-D.ietf-roll-of0.xml"?>
```

→ [I-D.ietf-roll-of0] Thubert, P., Ed., "RPL Objective Function Zero" draft-ietf-roll-of0-15 (work in progress), July 2011.

```
<?rfc include="reference.IEEE.802-11H.2003.xml"?>
```

→ [IEEE.802-11H.2003] "Information technology - Telecommunications and information exchange between systems - Local and metropolitan area networks - Specific requirements - Part 11: Wireless LAN Medium Access Control (MAC) and Physical Layer (PHY) specifications - Amendment 5: Spectrum and Transmit Power Management Extensions in the 5 GHz band in Europe", IEEE Standard 802.11h, Oct 2003, <<http://standards.ieee.org/getieee802/download/802.11h-2003.pdf>>.

(2) The Long Way

Define an ENTITY inside the DOCTYPE reference at the top.

```
<!DOCTYPE rfc SYSTEM "rfc2629.dtd" [  
<!ENTITY rfc2119 SYSTEM "http://xml2rfc.ietf.org/public/rfc/bibxml/  
reference.RFC.2119.xml">  
<!ENTITY roll-of0 SYSTEM "http://xml2rfc.ietf.org/public/rfc/bibxml3/  
reference.I-D.ietf-roll-of0.xml">  
<!ENTITY 80211H SYSTEM "http://xml2rfc.ietf.org/public/rfc/bibxml2/  
reference.IEEE.802-11H.2003.xml">  
>
```

Then in the references section:

```
&rfc2119;  
&roll-of0;  
&80211H;
```

(3) The Really Long Way

Include the complete reference element.

```
<reference anchor='RFC2119'>
  <front>
    <title abbrev='RFC Key Words'>Key words for use in RFCs to Indicate Requirement Levels</title>
    <author initials='S.' surname='Bradner' fullname='Scott Bradner'>
      <organization>Harvard University</organization>
      <address> [snip] </address>
    </author>
    <date year='1997' month='March' />
    <area>General</area>
    <keyword>keyword</keyword>
    <abstract>
      [snip]
    </abstract>
  </front>

  <seriesInfo name='BCP' value='14' />
  <seriesInfo name='RFC' value='2119' />
  <format type='TXT' octets='4723' target='http://www.rfc-editor.org/rfc/rfc2119.txt' />
  <format type='HTML' octets='17491' target='http://xml2rfc.ietf.org/public/rfc/html/rfc2119.html' />
  <format type='XML' octets='5777' target='http://xml2rfc.ietf.org/public/rfc/xml/rfc2119.xml' />
</reference>
```

A Reference from Scratch

```
<reference anchor="" target="">
  <front>
    <title></title>
    <author initials="" surname="" fullname="">
      <organization />
    </author>
    <date month="" year="" />
  </front>
  <seriesInfo name="" value="" />
</reference>
```

Note: It's preferable that you use the citation libraries esp. for RFCs and Internet-Drafts.

Reference Tags

- How to get numbered refs instead of symbolic (e.g., [1] instead of [RFC2119]):
Use the PI `<?rfc symrefs="no" ?>`
(Note: “yes” is the default.)
- How to get names instead of RFC numbers (e.g, [IKEv2] instead of [RFC5996]):
Insert the complete reference element and change the anchor attribute.
`<reference anchor="IKEv2">`
Also, update any corresponding xref targets.

Inserting a table

The `texttable` element contains `ttcol` elements to define the columns and `c` elements to hold the contents of each cell.

```
<texttable anchor="table_ex" title="IETF Meetings in 2005">
  <ttcol align="center">IETF #</ttcol>
  <ttcol align="center">City</ttcol>
  <ttcol align="center"># of Attendees</ttcol>
  <c>62</c><c>Minneapolis</c><c>1133</c>
  <c>63</c><c>Paris</c><c>1450</c>
  <c>64</c><c>Vancouver</c><c>1240</c>
  <postamble>Data from http://www.ietf.org/meeting/past.html</postamble>
</texttable>
```

yields:

IETF #	City	# of Attendees
62	Minneapolis	1133
63	Paris	1450
64	Vancouver	1240

(figure/artwork elements are another option.)

Data from <http://www.ietf.org/meeting/past.html>

Table 1: IETF Meetings in 2005

Dos and Don'ts

- Do use `xref` for references.
- Do use `xref` for section cross-references.
- Do use `list` elements for lists.
- Don't hard-code your references.
- Don't hard-code a section number (to refer within a document).
- Don't insert a list as a figure.

Common errors when using xml2rfc v2

Error

<list> is not nested in <t>

Message:

Element section content does not follow the DTD, expecting ((t | figure | texttable | iref)* , section*), got (t t list t t)

Ampersand encountered.

Message:

xmlParseEntityRef: no name

Solution

Add <t> around each <list>

(or simply leave the preceding <t> open before a <list> and add a <t> after the <list>)

Replace & with &

Put your XML file to work

- Share comments/edits with your coauthors.
- Upload it to the I-D Submission Tool when you post your draft
<https://datatracker.ietf.org/submit/>
- Send it to the RFC Editor if your draft is approved for publication as an RFC. (They will already have it if you uploaded it.)
- Create and read the HTML version. Check out Julian Reschke's XSLT for an alternative to xml2rfc's HTML output.

What is Julian's rfc2629.xslt?

a set of XSLT transformations that can be used to transform RFC2629-compliant XML to various output formats, such as HTML and PDF.

Documentation:

<http://greenbytes.de/tech/webdav/rfc2629xslt/rfc2629xslt.html>

No conversion required - just open the XML file in the browser.

If submitting your XML file to the RFC Editor

- If you used multiple files, consolidate your XML source into one file.
(For example, if you used a local citation library, insert the files.)
- Run the file using `xml2rfc` as available online. Make sure it creates a text file.
- If using PIs that are local or specific to alternate XML converters, please note they will be ignored by `xml2rfc`.

How do I control whitespace?

(a.k.a. How do I get blank lines between list items?)

Use the PIs `compact` and `subcompact`. We recommend `compact="yes"` and `subcompact="no"`.

- `compact="yes"` will not start each main section on a new page.
- `subcompact="no"` will put one blank line between list items.
- This should minimize the need for `vspace`.

Documentation and more information

Provide feedback:

- The description of the v2 language is being worked on -- see [draft-reschke-xml2rfc](#)
- A v3 update to the xml2rfc language is also being worked on for future use -- see [draft-hoffman-xml2rfc](#)
